HOW TO FEED:

Controlled and gradual feeding of pellets is important to introduce animals to a change in their diet. Give special attention to introducing excessively hungry or drought-affected animals. Over the first 10 days, feed small controlled amounts of pellets, starting with 0.2% of bodyweight per day, and gradually increase the amount fed per day.

After the introduction period, feed free choice in conjunction with fibre forages.

Ensure that clean fresh water is available at all times.

OTHER INFORMATION: Products are available in Bulk (minimum 4 Tonnes), Bulka Bags and 20kg bags
