

WHEAT BRAN

PRODUCT DESCRIPTION

Wheat bran is produced during the flour milling of wheat and consists of the protective layers of wheat grains. Bran contains much of the vitamins and protein of the wheat grain.

DIRECTIONS FOR USE

- Wheat bran is very palatable and can be fed to pigs, poultry, cattle, sheep and horses. Wheat bran has a laxative effect due partly to the fibre only being partially digested.

SUGGESTED MAXIMUM INCLUSION RATES IN TOTAL DIET

SPECIES	INCLUSION RATES
PIGS	
Starter	0%
Grower	15%
Finisher	25%
Breeder	30%
POULTRY	
Layer	15%
Broiler	10%
CATTLE	50%
HORSES	50%
SHEEP	50%

LIMITATIONS

- Due to the high fibre levels and the laxative effect, wheat bran should not be fed to young stock.
- The bulkiness of bran could limit its use in feed with automatic feeding equipment. (Levels up to 15% will not usually cause these problems but this may vary depending on the characteristics of the feed bin in use.)
- Further limitations may be imposed by the bulkiness of the material.
